

All-Star™ Portable Floor with *NEW* RapidLatch™ Locking System

Robbins revolutionary new “no loose parts” locking system, *RapidLatch*, is the 1st of its kind. This unique, one-of-a-kind design option is available on the All Star portable flooring systems and features:

- Elimination of panel gaps producing a tighter & SAFER floor
- “No loose parts” lock reduces installation time
- Speeds up arena change-overs & usability
- Adjustable for varying environmental conditions

All Star Portable with Rapid Latch Lock

Typical Portable floors are created with individual 4'x8' panels bolted or pinned together to create one large floor. A typical floor size is 60' x 112'. When portable floors are laid down for long periods of time, separation gaps may begin to appear at the panel seams. These gaps not only create an aesthetical issue with the floor, but also create a potential tripping hazard for the athlete, resulting in a liability for the arena or facility owner.

All Star Portable with
Rapid Latch Lock Installation 2015

In addition, pins and bolts often get misplaced during the floor assembly and disassembly process. RapidLatch no loose parts locking system has eliminated the need for facilities to purchase new pins and bolts on a regular basis. This locking system is quick to install and keeps the joints closed and tight over time.

All-Star™ Portable Floor with *NEW* RapidLatch™ Locking System

Hear what our customers have to say!

"Our new All Star Plus portable basketball floor is fantastic. The new hinged locking system and no loose parts is an awesome upgrade to our old bolt-together floor. This new locking system has cut hours off our conversion time and has made keeping the floor square a much easier task. We also visited with some of the players and they really like how the floor played". Scott Smith, Director of Operations, Swiftel Center
